2022 Report of the IUCN Species Survival Commission and Secretariat

The IUCN Specialist Group (SSG) is a science-based network of experts in a particular taxonomic group, all of whom are members of the IUCN. The SSGs are the primary mechanism for the assessment of the conservation status of species and for the development of conservation action plans.

Members of the SSG are nominated by the IUCN Commission on Conservation (CoC) and are appointed for a period of three years. They are expected to meet regularly and to report to the CoC on their activities.

The Specialist Group is a key component of the IUCN's conservation strategy. It provides the scientific basis for the IUCN's Red List of Threatened Species and for the development of conservation action plans. The SSGs also play a vital role in the identification of conservation priorities and in the monitoring of the progress of conservation efforts.

The SSGs are organized into 11 taxonomic groups, each of which is responsible for a specific taxonomic group. The groups are:

1. Amphibians and Reptiles
2. Birds
3. Butterflies and Moths
4. Fishes
5. Invertebrates
6. Mammals
7. Plants
8. Freshwater Invertebrates
9. Terrestrial Invertebrates
10. Vascular Plants
11. Vertebrates

The SSGs are supported by the IUCN's Specialist Group Secretariat, which is based in Cambridge, UK. The Secretariat provides administrative support and coordinates the activities of the SSGs.

The implementation of the IUCN's conservation strategy is a complex task that requires the cooperation of many different organizations and individuals. The SSGs play a vital role in this process by providing the scientific basis for the IUCN's conservation actions.

The SSGs are also responsible for the development and implementation of conservation action plans for the species under their responsibility. These plans are based on the best available scientific information and are designed to ensure the long-term survival of the species.

The SSGs also play a vital role in the monitoring of the progress of conservation efforts. They provide regular reports to the CoC on the status of the species under their responsibility and on the progress of the conservation actions being implemented.

believe it necessary to... the species of the IUCN, according to the Canary Islands, if the species is considered, it can be included in the Canary Islands and the economic and environmental. The species of the IUCN and the government of the Canary Islands do not have an economic and/or environmental. On the other hand, the species of the IUCN is included in the annual meetings/ events of the Canary Islands. In addition, the species of the IUCN is included in the national government of the government of the Canary Islands.
