2023 Report of the IUCN Species Survival Commission and Secretariat

2 2 2 2 2

The mission of the IUCN SSC Sonoran Desert Plant Specialist Group (SDPSG) is to prevent the extinction risk of all Sonoran Desert plant species, educate the public about Sonoran Desert species and their care, and implement conservation plans developed by the Red Listing process.

Review description: All of our Fabaceae species within the Learning Center (LC) region have been identified and will be submitted in 2024, when we will endeavor to complete the floristic inventory of the Fabaceae species within the LC region.

-010 Develop a threats map of the Sonoran Desert to assist in drafting assessments.
(KSR 5)

Number of research projects completed or reviewed by SSC member or economic geographer: 0

Review description: We completed additional training materials for the threat map and the design began for the threat map. We hope to make the threat map publicly available in 2024.
