10% of global greenhouse gas emissions. More effective water management will also enable smarter climate adaptation. Revolutionising the way we use, store, distribute, and treat the world's finite amount of freshwater and investing in nature-based solutions, is key to reaching our climate goals.
Water resilience builds climate and socio-economic resilience.
Climate impacts are often felt through water. Droughts, floods, and sea level rise are water-related, and the blue thread that connects all ecosystems and all life on Earth is the foundation for sustainable development. Sustainable water management is the
