2. On the basis of the available evidence, do
 you think that EU action is needed to
 address indirect land use change?

3. If action is to be taken, and if it is to have
 the effect of encouraging greater use of
 some categories of biofuel and/or less use
 of other categories of biofuel than would
 otherwise be the case, it would be
 necessary to identify these categories of
 biofuel on the basis of the analytical work.
 As such, do you think it is possible to draw
 sufficiently reliable conclusions on whether
 indirect land use change impacts of biofuels
 vary according to: feedstock type?
 Geographical location? Land management?
